SKILLS SUMMARY

- **Languages**: Python, SQL, JAVA ,C++
- **Technical Skills**: Pandas, NumPy, Scikit-learn, TensorFlow, OpenCV,YOLO, FaceRecognition, HuggingFace Transformers, LangChain, LLMs, Prompt Engineering, FastAPI, RAG (Retrieval-Augmented Generation)
- **Platforms**: PyCharm, Jupyter Notebook, Visual Studio Code , Google colab
- **Soft Skills**: People Management, Excellent communication

EDUCATION

University of Management and Technology Lahore
Masters in Artificial Intelligence ; CGPA: 3.88 **2026 - present**

PMAS UAAR Rawalpindi
Bachelors of Computer Science; CGPA: 3.26 **2020 - 2024**

WORK EXPERIENCE

AI Engineer | Neurovise **April 25 - present**

Working as a Python AI Developer at Neurovise, developing and deploying LLM-based applications like MoodMap and a multilingual Arabic learning assistant using LangChain, OpenAI, and RAG. Built scalable FastAPI services, integrated ChromaDB, and handled deployments with Docker and AWS, along with contributions to computer vision tasks.

Generative AI Developer | Alright Tech **Jan 25 - April 25**

Worked as a Generative AI Developer at Alright Tech, building LLM-powered chatbots using RAG architecture with LangChain, OpenAI, and HuggingFace. Developed Flask-based RESTful APIs and implemented prompt engineering, document indexing, and vector database integration for context-aware responses.

Computer Vision Engineer | Softwise Sol **May 23 - Jul 24**

Worked as an Computer Vision Engineer at Softwise Sol, focusing on computer vision projects involving object detection and image segmentation. Developed and optimized models such as YOLO and Mask R-CNN using OpenCV and TensorFlow, contributing to real-world applications with custom data pipelines, annotation workflows, and performance tuning for challenging visual datasets.

PROJECTS

MyNKL: Developed "Mynkl" an AI-powered mental wellness app that enables users to check in with their mood, view nearby users on a live emotion map, and receive personalized activity suggestions using LLMs and mood-based analysis. Integrated FastAPI backend with PostgreSQL, Google Maps API, OpenAI, and Spotify to deliver real-time, location-aware recommendations and push notifications, fostering emotional support and social connection.

SynTalk: Built an AI-driven conversational calling platform that autonomously handles inbound and outbound business calls, guiding customers through booking flows, qualifying leads, and syncing data with CRMs. Architected a real-time voice pipeline using FastAPI, Twilio, OpenAI Realtime API, and ElevenLabs, with MongoDB managing multi-tenant configurations and dynamic agent instructions. Delivered sub-second responses, automated post-call emails via Gmail API, and seamless CRM lead handoff for scalable autonomous sales and service calls.

CardNest: Contributed to a fintech platform for real-time card fraud detection and chargeback prevention. Developed an AI-powered card scanning feature to analyse security elements, validate card authenticity, and detect anomalies before transactions. Integrated the pipeline with a fraud intelligence engine using transaction history, location consistency, and behavioural biometrics to flag suspicious activity. Built with a PCI/DSS-compliant architecture that performs real-time analysis without storing sensitive cardholder data, supporting integration with payment gateways and e-commerce platforms.

SynChat: Built a customizable AI customer support chatbot platform where businesses upload their products and documents to create a personalized knowledge base, and the chatbot handles customer queries based entirely on that business's content. Businesses get an embeddable link to drop into their website and a dashboard to configure their chatbot, manage documents, and monitor conversations, making it easy to deploy a fully branded support assistant without any technical overhead.

Arabic Chatbot: Built a multilingual RAG-based Arabic learning chatbot using FastAPI, LangChain, and HuggingFace embeddings to help English, Spanish, and Arabic-speaking students learn Arabic through religious content. Integrated

ChromaDB for semantic search, MongoDB for user and chat history, and OpenAI for natural language responses. Included PayPal integration to support premium content access, enabling a smooth and scalable subscription model.

Face Attendance System: The project involves real-time student attendance tracking utilizing face encodings for recognition. Employing OpenCV, FaceRecognition, and NumPy libraries enabled accurate student identification. Attendance data was promptly stored on Firebase for seamless tracking and management. This system offers schools and institutions an efficient solution for monitoring student attendance with ease.

Potato Disease Classification: Developed a deep learning model using TensorFlow to classify potato plant diseases into three categories based on images. Employed convolutional neural networks (CNNs) for image recognition and classification. The project involved data collection, preprocessing, augmentation, and model training and evaluation, achieving high accuracy in distinguishing between healthy plants and those affected by diseases such as early blight and late blight.

Cold Email Generator: Developed a Python-based email generator as a Streamlit app for an outsourcing company. The app web scrapes job postings and analyzes requirements with Meta Llama (LLM). It compares new job data against existing candidate profiles stored in ChromaDB and generates personalized emails with portfolio links of qualified candidates. Key technologies: Python, Streamlit, generative AI, LLMs, ChromaDB, LangChain, GROQ.

CERTIFICATES

- **IBM Professional Certification for Data Science (IBM)**
- **Introduction to Computer Vision and Image Processing (IBM)**
- **Introduction to Deep Learning and Neural Networks with Keras (DeepLearning.ai)**
- **Convolutional Neural Networks in Tensorflow (DeepLearning.ai)**
- **Introduction to TensorFlow for Artificial Intelligence, Machine Learning, and Deep Learning (IBM)**
- **Data Science (PMAS UAAR)**
- **Generative AI with LLMS (DeepLearning.AI)**
